Projects

J.A.T.E

J.A.T.E is just another text editor, except it can be installed and used on your desktop using the power of progressive web applications!

Purpose: Demonstrate the ability to create progressive web applications that can be run on the desktop, store persisting data via local storage, and maintain functionality offline.

Technologies Used: HTML, CSS, Javascript, Node.js, Express.js, and NoSQL

Contribution: Solo Project

Deployed Application: https://jate-pwa01.herokuapp.com/

Repository: https://github.com/AnthonyJohnson101/jate-pwa

Day2Day

Day2Day is dashboard that displays current data such as the current weather, stock prices, and recent news articles. It also has a word of the day to sharpen your vocabulary.

Purpose: Demonstrate the ability to work collaboratively with peers, using AGILE development techniques to deliver a web application that utilizes third-party APIs and a mobile responsive UI.

Technologies Used: HTML, CSS, JavaScript, and Third-Party APIs.

Contribution: API implementation and some design.

Deployed Application: https://anthonyjohnson101.github.io/recent-events-dashboard/

Repository: https://github.com/AnthonyJohnson101/recent-events-dashboard

ReciPeers

ReciPeers is a platform for sharing your favorite recipes or finding something new to cook up in the kitchen.

Purpose: Demonstrate the ability to create a web application while collaborating with peers that is connected to a backend database and utilizes the Handlebars.js framework.

Technologies Used: Handlebars.js, JavaScript, CSS, Node.js, Express.js, Sequelize, and MySQL

Contribution: Account Creation, Sign-In/Out functionality, and HTML generation upon database entry (new recipes).

Deployed Application: https://recipeers.herokuapp.com/

Repository: https://github.com/AnthonyJohnson101/project-2
